command control communications and intelligence form the backbone of the army s operating system but while much attention has been given in the literature to the other three elements communications in the british army during world war ii have been widely ignored this book rectifies the omission it shows that failures in front line communications contributed to several of the set backs suffered by the army but also that ultimate victory was only achieved after a successful communications system was in place it explains how the outcome of the main campaigns in europe and north africa depended on communications how the system operated and how it evolved from a relatively primitive and inadequately supplied state at dunkirk to a generally effective system at the time of the rhine crossings problems still occurred however for example at infantry platoon level

and famously with paratrooper communications at arnhem often simply due to the shortcomings of existing technology the book concludes that it is only very recently that advances in technology have allowed those problems to be solved

for nearly 20 years the army has had limited success in developing an information network sensors software and radios to give soldiers the exact information they need when they need it in any environment such a network is expected to improve situational awareness and decision making in combat under its network modernization strategy the army is implementing a new agile process intended to leverage industry technology solutions the army has taken a number of steps to begin executing its network strategy and agile process including establishing a baseline network architecture for army communications the army s agile process involves seven phases and three decision points to allow officials to quickly evaluate emerging networking technologies to determine if they address capability gaps and can be deployed to the field however the network strategy is still evolving and the army has not yet executed one full cycle of the agile process this book addresses the extent to which the army s network strategy and agile process addresses cost technology maturity security and readiness and the army s strategy for facing other risks and challenges this book also examines the results of the network integration evaluations nies conducted to date and the extent to which the army has procured and fielded network solutions and army actions to enhance the nie process publisher s website
